

Marine and Coastal Monitoring

Strategic Objective: Conservation

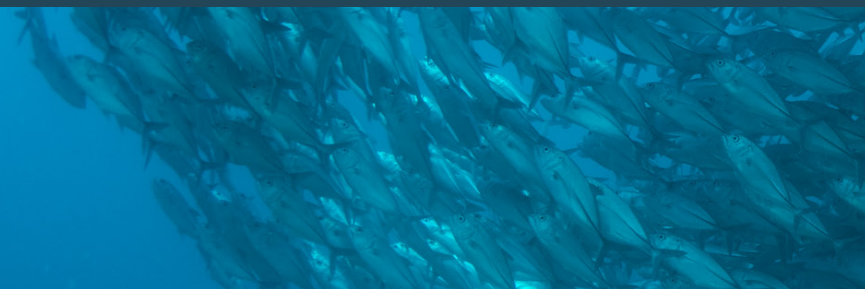

Photo by Pascal van de Vendel / Unsplash

Objective

The project aims to promote the monitoring of marine protected areas (MPAs) and the natural resources of Mexican seas, to understand the state of marine and coastal resources, and to promote synergies that avoid duplication of efforts, facilitating decision making.

Lines of work

- 1 Development of a marine and coastal monitoring platform.
- 2 Generation of information on the coverage and distribution of red mangrove in northwestern Mexico and the Yucatan Peninsula.

- 3 Diagnosis of aquaculture in Mexico for the identification of lines of action towards sustainability.

Achievements

Monitoring and validation of **red mangrove** distribution maps in Mexico.

Publication of the digital document "**Diagnosis of aquaculture in Mexico**".

Data updated at the end of 2022.

Allies

Donor:

- The David and Lucile Packard Foundation

Partners:

- Comisión Nacional para el Conocimiento y Uso de la Biodiversidad
- The Nature Conservancy México
