

Objective

The Coastal Watershed Conservation in the Context of Climate Change (C6) project aims to promote integrated management in coastal watersheds to conserve their biodiversity, contribute to climate change mitigation and strengthen the sustainable use of their natural resources. This is for the recovery of watershed functionality and the provision of its ecosystem services.

Lines of work

- 1 Creation and consolidation of protected areas (PAs).
- 2 Promotion of watersheds sustainability.

- 3 Enabling adaptive management by strengthening monitoring capacities.

Achievements

C6 contributes to the operational capacity of **10 PAs** and is the basis of the CONECTA and RÍOS projects.

The project was highlighted as a **milestone of excellence** by the Global Environment Facility (GEF) and the World Bank.

Data updated at the end of 2023.

Allies

- Donors:**
- Global Environment Facility
 - World Bank
- Partners:**
- Ministry of Environment and Natural Resources
 - National Commission of Natural Protected Areas
 - National Forestry Commission
 - National Institute of Ecology and Climate Change
