## Objective

The Mesoamerican Reef Conservation (SAM, acronym in Spanish) project aims to support the consolidation of marine and coastal Protected Areas (PAs), protect biological diversity, and promote the sustainable use of natural resources. The project also seeks to foster economic well-being and improve the quality of life for the communities that depend on the reef system shared by Mexico, Belize, Guatemala, and Honduras.

## Lines of work

**1** Strengthening marine PAs to ensure the use of marine resources in the medium term.

**2** Promoting economic well-being and improving the quality of life of local communities.

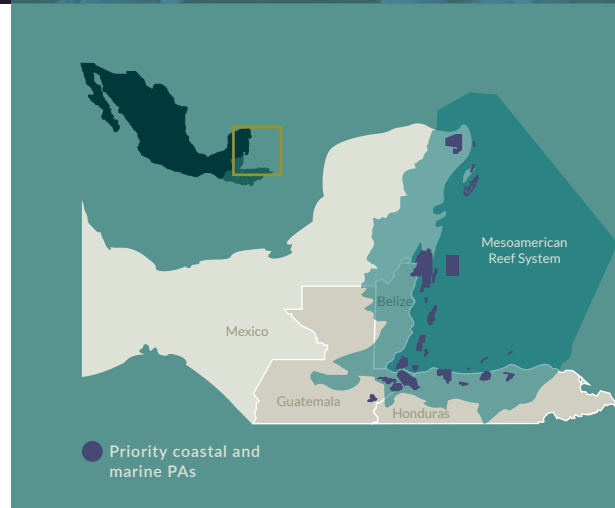

## Achievements

**40 projects**  
implemented to  
**strengthen** local  
communities.

**502 people**  
adopting best  
sustainable practices.

**2,045 people**  
trained.

Data updated at the end of 2024.
